

PRODUCE YOUR BRAND • BERLIN

# You describe what you want made.

We tell you **if it's possible, how to make it, and who can make it.**

Today that is a week of emails. We do it in 30 seconds.

WHERE ORDINARY SEARCH STOPS WORKING

**500 hoodies with your logo on them**

---

Google solves this. Always will. Not our market.

**100 yoga mats you already own, printed in gold**

---

Nobody can tell you if this is even possible.

This is the request we built for.

## FOUR UNKNOWNNS KILL THE ORDER

---

- 01 Can it physically be made?
  - 02 Who accepts goods you already own?
  - 03 Does the minimum order fit?
  - 04 Is the deadline real?
- 

Every one is knowable – you just discover them one at a time, by email, over a week.

WE ASKED A BERLIN PRINT SHOP WHAT WOULD MAKE THIS WORTH USING

**“ChatGPT macht  
keine Bewertungen.”**

– customer interview, Berlin print shop

It cannot evaluate a supplier. No ratings, no proven offers, no accountability. That is the gap we build in.

● LIVE PRODUCT, NOT A MOCKUP

# Let me show you.

`produceyourstuff.up.railway.app`

SEBASTIAN · DATA SCIENTIST

# The moat is the data, not the model.

Print pricing cannot be scraped — it sits in business logic nobody publishes. Whoever collects it properly, by hand, owns it.

Minimum order · lead time · materials · who accepts customer-owned goods

HOW IT WORKS · ONE LANGGRAPH STATE GRAPH, FOUR STAGES, FIVE HUMAN GATES

14 nodes · 5 × interrupt() · 6 conditional-edge routers | a live OpenStreetMap lookup sits *outside* the graph on purpose – unverified leads, never scored

STEFAN • AI ENGINEER

# The model reads. Code decides.

Zero AI in the scoring, checked automatically on every build. Same input, same answer, every time.

A supplier will only pay for leads from a system that cannot misrepresent what they can do.

28-30 SEPTEMBER • THE BRIEF DROPS AT 10:00 ON DAY ONE

# Nobody knows the challenge yet. We know what we do with one.

**THE ASK** An AI build on real Berlin data, working prototype in 48 hours

**DONE THAT** Messy domain, no clean dataset — shipped and deployed

**EVIDENCE** 309 tests • 19/19 evaluation • one interview that changed the build

We are not pitching a plan.  
We are pitching **a track record.**

TWO AI ENGINEERS AND A DATA SCIENTIST

Katerina

AI ENGINEER

Sebastian

DATA SCIENTIST

Stefan

AI ENGINEER

Deployed product

309 automated tests

19 / 19 behavioural evaluation

One real customer interview

Data · engineering · web – the mix the challenge asks for. We are three and ready to take two more, from any school.

PRODUCE YOUR BRAND

**You describe what  
you want made. We  
tell you if it's possible,  
how to make it, and  
who can make it.**

Send us to Berlin and we will make it a transaction.
